Army Declass/Release Instructions On File

Declassification/Release Instructions on File

FOR INCLUSION IN SECTION 13, CHAPTER I, NIS 19

The ZAHONY transloading site occupies an area 2.6 miles long and 0.14 miles wide. It consists of four (4) separate but adjoining yards, extending along the rail line from SW to NE. The approximate size of the four (4) yards are as follows:

- 5000 feet long - 12 to 15 tracks wide
- 3500 feet long - 25 to 30 tracks wide
- 3700 feet long - 21 to 25 tracks wide
- 4700 feet long - 26 to 30 tracks wide

Present facilities include a locomotive repair shop approximately 200 feet x 100 feet, a turntable 90 feet in diameter, a car repair shop 200 feet x 70 feet, a coaling tipple, and a large freight shed 780 feet x 35 feet.

Construction activity is prevalent throughout the area. Grading operations and the construction of concrete platforms now underway indicate expansion of existing transloading facilities.
